Research an AI agent can cite, with a receipt for every claim.

Hyperresearch is an AI research platform with two products. **Deep** writes long, fully cited research reports and checks every citation against its source. **Answers** is an API and MCP server that gives AI agents one short, checked answer to a question, with the quotes it rests on.

DEEP REPORTS

One question in, a cited report out: it plans the research, reads hundreds of sources, writes the report, then checks each citation (supported, partially supported, unsupported, wrong source) and keeps the sources in a vault you can reopen. Runs in the web console or through the REST API.

ANSWERS API AND MCP

The `ask` tool takes one question and returns the answer, the URL and the exact quote it rests on, each matched against its page; with no support it returns not_found instead of a guess. Works in Claude, ChatGPT, Cursor, VS Code and any MCP client, or as REST, an AI SDK tool and a LangChain tool.

WHO IT'S FOR

Analysts, consultants and researchers who need a report they can defend, and developers who want their agents to answer with sources instead of a search loop.

BROWSECOMP · ANSWERS

SYSTEM	CORRECT
Hyperresearch	**89%**
Parallel (Pro)	73%
OpenAI web search	58%
Perplexity Sonar Pro	43%
Exa	12%

100 questions, October 2026, % correct.

DEEPSEARCHQA · ANSWERS

SYSTEM	CORRECT
Hyperresearch	**85%**
Parallel (Pro)	81%
OpenAI web search	70%
Exa	28%
Perplexity Sonar Pro	24%

100 questions, October 2026, % correct.

DRACO · DEEP

SYSTEM	SCORE
Hyperresearch Deep	**77.7**
Claude Research (Opus)	73.0
Parallel Ultra	61.5
You.com Research 8 of 10	60.1
Perplexity Deep Research 8 of 10	57.8
Valyu DeepResearch Heavy 8 of 10	57.2
ChatGPT Deep research	55.2
Gemini Deep Research	54.7

10 tasks (one per domain), the paper's grader, GPT-5.2 judge. "8 of 10" = scored on 8 of the 10 tasks.
